Custom-companyName => company valid custom questions(make sure you add "Custom-" before  
htmlname of Question). for value you should provide valid value of custom question either it will throw  
Error

## IVR

api url=>https://vscrm.in/api/lvr/<your company uid>

ex.=>https://vscrm.in/api/lvr/2d25e3e4-da2e-ea11-a2e0-84901044789e

method=>Post

Content Type=>application/json

send data will be like below one

```
{"callfrom":"5555544311","customername":"ranu","customeremail":"pravirocks12@gmail.com","empnumber":"8107666923"}
```

for example..if there custom question html name is =>AmountPay(make sure no space between html name)

then the request will be like

```
{"username":"sachin1","usermobile":"5555544333","useremail":"pravirocks9@gmail.com","AmountPay":"500"}
```

Another example if they wants a field where they can store Reg No

so the html name of question can be like RegNo or CustomerRegNo

if they choose "RegNo" as html name

then request would be like

```
{"username":"sachin1","usermobile":"5555544333","useremail":"pravirocks9@gmail.com","AmountPay":"500","RegNo":"xxxyy"}
```

if they would have choosen "CustomerRegNo" as html name

then request would have been like

```
{"username":"sachin1","usermobile":"5555544333","useremail":"pravirocks9@gmail.com","AmountPay":"500","CustomerRegNo":"xxxyy"}
```
